***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to SYSTEM FOR DETECTING INCOMING LIGHT FROM A LASER SOURCE, classified in class 250, subclass 216.
- II. Claims 7-18, drawn to A METHOD FOR DETECTING A SOURCE OF AN INCOMING LASER, classified in class 250, subclass 221.
- III. Claims 19-21, drawn to METHOD FOR RECIPROCAL TARGETING OF A SOURCE OF AN INCOMING LASER, classified in class 250, subclass 221.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case Invention I can be used with any other laser detecting method.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention II does not require the step "translating each of the plurality of microlenses to a plurality of lens positions" in

Art Unit: 2878

Invention III. The subcombination has separate utility such as Invention III does not require the step "determining a wavelength of the incoming laser" in Invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
